

## RMPP141 NATURAL

---

**RMPP141** is a Polypropylene (PP) Compound specifically developed for rotational molding, available as ambient ground powder or pellets. Black is also available ex stock.

It has excellent moldability and its enhanced properties allow it to be used in demanding applications for which polyethylene is not the optimum polymer.

**RMPP141 Natural** complies with the following:

- U.S. 21 CFR F.D.A. regulation Part 177.1520 clause (c) (1.1) and (d).
- EU Directive 10/2011 & 1935/2004

### FEATURES:

- **An excellent balance of high stiffness & high impact**
- **Good Temperature Resistance (dry & wet)**
- **High FNCT / ESCR and good chemical resistance**
- **Rated > UV12**
- **Excellent long term creep performance**
- **Improved surface hardness and scratch resistance**

### PROCESSING GUIDELINES:

- Oven temperature ~ 570<sup>0</sup>F to achieve mold surface temperature > 475<sup>0</sup>F
- PIAT 435<sup>0</sup>F – 455<sup>0</sup>F
- Rotation similar to LMDPE
- Smartvents will increase pressure inside mold and assist with reducing warpage and minimising pinholes
- PP can stress whiten so minimise impact when demolding

### OBSERVATIONS:

- Lubricity of PP means little or no mold release needed
- Lower shrinkage than PE
- Less warpage for large surfaces due to stiffness and crystallization
- Complete crystallization may take up to 72 hours to obtain optimal physical properties
- Heat is critical for sintering PP, so minimise heat sinks in mold

Properties	Conditions	Units	Nominal Values	Testing Methods
